Hyundai SeasAll-Modern Diesels for a Changing Environment

As the marine environment changes, so do the needs of boaters and boatbuilders. Hyundai SeasAll, specialized marine engine company with Hyundai Powertrain Technology, is ready to meet the most stringent legislative requirements with a growing range of technically advanced high speed diesel engines.

NEW
THINKING.
NEW
POSSIBILITIES.

UNIVERSAL TANK SENDER FROM OFFSHORE

www.osukl.com

The NMEA 2000 Universal Water Level Sender from Offshore Systems measures the fluid level of fresh water, grey water and black water tanks, reducing the amount of inventory that needs to be held in stock. A small rotary Tank Type switch indicates the type of fluid that is being measured, while a second Tank Number switch allows up to 16 senders of each type to be connected to a single NMEA 2000 network. Made from stainless steel, the sender provides a tank level accuracy of +2 or -2 per cent to the NMEA 2000 marine network.

BESENZONI TRANSOM DOORS

www.besenzoni.it

Besenzoni's new transom doors offer a full-screen "sea view" when closed and are mounted on a modern frame made from polished or powder-coated stainless steel. Each section of glass can be moved downwards and obscured from view, transforming the cockpit and saloon into one large open space. The doors are available with manual or hydraulic mechanisms and the dimensions and locking systems are fully customisable.

PLB BY KANNAD

www.kannadmarine.com

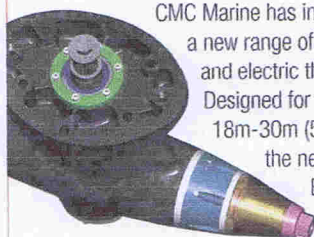

The SafeLink SOLO Personal Locator Beacon (PLB) from Kannad Marine provides direct contact with search and rescue services worldwide. The integral 406 MHz beacon operates on the global COSPAS SARSAT satellite communication system. Fifty GPS channels ensure the beacon's position can be pinpointed accurately and speedily, even in the most remote locations.

The small, lightweight unit is waterproof to 10m (33ft) and can be tucked into a pocket or kit bag, or attached to a belt.

CMC THRUSTERS

www.cmcmarine.com

CMC Marine has introduced a new range of hydraulic and electric thrusters. Designed for boats from 18m-30m (59ft-98ft), the new Dualis BTM 20, BTM 30, BTM 40

and BTM 50 replace the 2009 series of Dualis thrusters with a wider range of units with different powers. The lowest power is now 18kW compared to 22kW and the highest is 45kW instead of 37kW. All thrusters have counter-rotating propellers, and a special pod mounting block allows each thruster to be coupled to both a hydraulic and electric motor for added flexibility.

Viking Compact

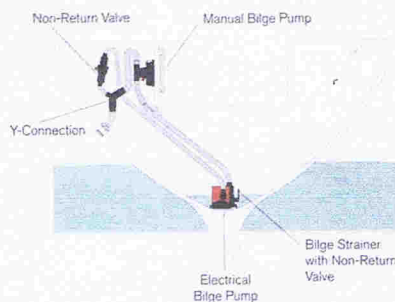

Dependability in the grasp of your hand!

Full-capacity, hand-powered bilge pump

When you need to bail water from the bilge at sea, you need to be able to rely on the pump at hand. Thanks to the Viking Compact manual bilge pump's well considered design, bailing has never been easier. Perfect for installation in tight spaces, the Viking Compact can be mounted wherever it's most appropriate.
