LATEST LAUNCHES

CMC expands Stabilis Electra range

www.cmcmarine.com

CMC MARINE HAS two new electric actuator fin stabilisers for larger yachts. The Stabilis Electra 20BR and 22BR work with stabilizer fin ranging from 1.6m-2.4m (5ft-8ft), which are suitable for yachts of over 60m (197ft). Benefits include high rotation speed; a significant reduction in absorbed power; reduced noise and improved installation. Both models join the recently introduced Stabilis Electra 16BR and 18BR found on several vessels built by leading Italian yards.

New Fischer Panda generator

www.fischerpanda.de

THE PANDA 10000 generator from Fischer Panda is an asynchronous 8kW generator featuring an advanced water-cooling system and two-cylinder engine. It offers an energy density performance of up to 12kW and its compact dimensions allow easy installation in limited space.

Also available in iSeries version, the Panda 10000i variable speed regulation allows exhaust emissions and fuel consumption to be reduced depending on its use.

Outboard engines from Hidea

www.hideaoutboards.co.uk

HIDEA'S RANGE OF outboard engines have been added to the Marathon Leisure product portfolio. Featuring manual and electric starts in both standard and long shaft sizes, the range fulfils the majority of leisure market requirements. Hidea's 2.5hp 4-stroke lightweight and compact outboards are designed for small tenders and feature a precise action twist grip throttle for safe and easy maneuvers.

The 3.6hp, 4hp and 5hp 4-stroke outboards use high precision air intake and air exhaust systems to allow them to run smoothly with low noise and improved fuel efficiency.

Maretron's fuel flow monitor

www.maretron.com

MARETRON HAS INTRODUCED the FFM100, a fuel flow monitor that uses positive displacement metering technology for accuracy to eliminate flow-conditioning components. It also provides true temperature compensation with embedded sensors and detects momentary reverse flow in the fuel lines due to fluctuating pressure. The FFM100 can be ordered for fluid types other than fuel, such as water and oil.

Battery chargers from Quick

www.quickitaly.com

THE NEW TECHNOLOGICAL solutions incorporated in Quick's SBC NRG battery chargers offers an output 15 per cent higher than market standard. A forced air ventilation system on the SBC NRG battery chargers creates a low noise output. The system is managed by a microprocessor, which controls the speed through an algorithm that uses two air temperature sensors — external and internal. The series includes features found in the previous ADV PLUS series, such as three-stages automatic charge and wide operating temperature range.
